INTELLIGENCE MADE USEFUL.

SmartPlay AI builds AI that makes the next decision clearer. We start in golf: a live AI caddie, an AI instructor for simulator bays, and a golf game in the browser. All three run on one intelligence engine.

Golfers get numbers. What they need is the decision.

On the course

Golf apps give yardages and charts. The golfer still has to work out the club, the target and the miss to favor while standing over the ball.

In practice

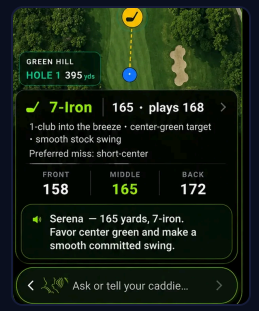

Real coaching is scarce and costs money, so most practice happens with no feedback at all, and the same faults get repeated.

In the simulator

Simulator golf is growing fast. A bay produces data on every shot, but turning that data into a lesson still needs a person in the room.

Most AI products answer with confidence even when they are guessing. In a sport where trust decides whether advice gets followed, that is a product defect.

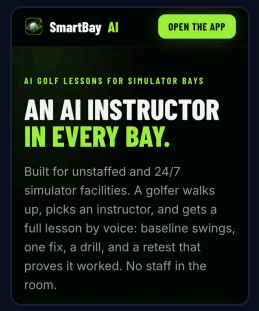

The golf triad: one game, three places to play it

LIVE · APP STORES

SmartPlay Caddie

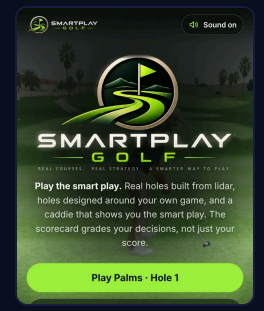

A voice-first AI caddie on the course. It calls the club, the target and the miss, and analyzes your swing from your phone.

DEMO · REAL BAY

SmartBay AI

An AI instructor for simulator bays. It gives a full lesson by voice, with no staff in the room: baseline swings, one fix, a drill, then a retest.

LIVE · BROWSER

SmartPlay Golf

A golf game on real holes built from lidar, scored on your decisions as well as your strokes.

On the course, in the bay and at home, the player and the caddie are the same, and so is the data. The plan is to bring all three under one Pro subscription.

SmartPlay Caddie: your intelligent golf partner

- Live on the App Store and Google Play since September 2026.
- A voice-first companion you talk to on the course. Two caddies ship, Kevin and Serena, and players can also build their own.
- Swing analysis from the phone camera, with a skeletal overlay and comparison against a reference swing.
- Distances and targeting from real course geometry, plus acoustic strike detection in a practice cage.
- Works with Apple Watch and Wear OS, and takes in data from tablets, GoPro and simulator bays.

No extra hardware

No club sensors and no tags. It runs on the phone the golfer already owns.

Intelligence that compounds

It learns from every round and session, so the player is not getting a one-time read from a single swing.

Pricing

Free tier: GPS yardages, scorecard and round history. SmartPlay Full: $9.99 a month or $79 a year, with a free trial in the store.

Golf is growing, and simulators are growing faster

48.1M

Total US golf participants in 2025, a record. Includes golf on and off the course.

29M+

Americans who played on a golf course in 2025. These are Caddie's core users.

8.1M

US simulator golfers in 2024, up from 3.8M in 2015. These are SmartBay AI's users.

Facility opportunity

6.5% of US golf facilities have installed simulators, and 13% plan to add them within one to two years. Every new bay is a place a SmartBay AI lesson can run.

Expansion with the same engine

The engine is already in beta outside golf: SmartManage (a life and executive assistant), SmartPump (fitness training) and SmartMotion (camera motion analysis).

SOURCES: NATIONAL GOLF FOUNDATION. SEE SLIDE 13.

Five reusable capabilities, each already running in Caddie

01	**User Model**	Player profiles and roster, swing and round history, coach notes with attribution, and tendencies tracked across sessions.
02	**Context Engine**	A GPS pipeline that rejects outlier fixes, uses authoritative course geometry and satellite imagery, and always respects a manual override.
03	**Decision Engine**	A tiered reasoning cascade. A local pre-classifier runs first, then a fast router, then a heavier model for substantive judgment.
04	**Learning Engine**	Swing capture that builds a labeled dataset, tendencies mapped to drills, and outcomes captured as part of the product rather than as telemetry.
05	**Interaction Engine**	Press-to-talk voice, camera swing analysis and acoustic strike detection.

Any new product gets these on day one, so the cost of building it is mostly the experience layer on top.

What is shipped, and what is planned

Working now

- SmartPlay Caddie is live and for sale on both app stores.
- A professional instructor uses Caddie inside paid lessons.
- SmartBay AI has run AI golf lessons in a real simulator bay at an indoor facility.
- SmartPlay Golf is playable free in the browser on lidar-built holes.
- SmartManage, SmartPump and SmartMotion are open to beta testers. The Inner Library is live.

Roadmap

- SmartBay AI pilots with indoor golf facilities.
- Multiplayer rounds.
- Illustrated, lip-synced caddie avatars.
- Smart-glasses and multi-sensor perception.
- An auto-compiled video highlights engine.
- Localization, starting with Japanese.

Consumer subscriptions first, then facilities

LIVE

Consumer subscription

SmartPlay Full costs $9.99 a month or $79 a year, with a free GPS and scorecard tier. There are no ads.

NEXT

Facility licensing

SmartBay AI is sold to simulator facilities. The setup is one camera and one screen, so a bay earns lesson revenue without an instructor present.

NEXT

One Pro plan across golf

Caddie, SmartBay AI and SmartPlay Golf under one subscription, which raises the value of each subscriber.

Instructor channel

A working golf instructor uses the product in paid lessons. Instructors are a trusted way to reach golfers.

Capital-efficient by design

One engine supports every product. One founder has shipped a live app on both stores, plus several web products, using AI as leverage.

Built to be trusted on the shot that matters

No hardware

There is nothing to buy, charge or screw into a grip, so a new player can start for free.

Decision, not data

One clear next action, with the reason behind it, instead of another dashboard.

Honest degradation

When the system cannot know something, it says so rather than guessing with confidence.

The human overrides the sensor

Every automatic detection has a manual override, and the system accepts it without argument.

Course to bay to couch

Point solutions cover one place. We cover all three with the same player and the same caddie.

Compounding data

Every round, bay session and game adds to one user model, which makes the advice better over time.

Deepen golf first, then extend the engine

NOW

Golf triad

- Caddie live on both stores
- SmartBay AI demo in a real bay
- SmartPlay Golf live in the browser

NEXT 6-12 MONTHS

Scale golf

- SmartBay AI facility pilots
- One Pro subscription across golf
- Multiplayer rounds
- Lip-synced caddie avatars
- Japanese localization

12-24 MONTHS

Platform

- Smart glasses and multi-sensor perception
- Auto-compiled video highlights
- Fitness, motion and assistant products on the same engine

Built by an operator, not a lab

Tim Gustafson, founder

Ten years in uniform: four in the Marine Corps as a military policeman, then six in the Army as a medic and radiology technologist. That was followed by 26 years in healthcare operations, including COO leadership in radiology and imaging. He is a PGA HOPE alum.

Why that matters

The products are aimed at the moment a decision gets made under pressure, with incomplete information, by someone who will own the outcome. That describes most of the founder's working life.

Tim came to software from operations and taught himself to build with AI. He took Caddie from idea to a live, paid app on both stores.

Who we want to talk to

Investors

We are raising a significant round to take SmartPlay from a live product to scale. It funds SmartBay AI facility pilots, user acquisition for Caddie, the avatar work and smart glasses.

Golf facilities & instructors

Indoor golf venues, simulator operators and teaching pros who want an AI lesson running in their bays or alongside their own coaching.

Technology partners

Simulator and launch monitor makers, wearable and smart-glasses platforms, and course data providers who want to build on the same stack.
